

Woodsman's Awning care and maintenance instructions

Storing your Woodsman's Awning -

The key here is to keep everything dry!

It's important that all the components of the Awning are put away dry and stored in a completely dry place. Moisture – such as canvas being put away when slightly damp – can cause mildew and rot to your Awning. Poles left outside will deteriorate and discolour.

Caring for your Woodsman's Awning -

To maintain the wooden poles of your Awning. This is cheap, quick and easy and really worth it!

Remove any dirt and dust (wipe back or clean with a scouring pad if necessary)

Make sure poles are dry

Use a soft cloth/rag to apply raw linseed oil mixed with white spirit. Ratio 4:1

Repeat this process every 6 months when in regular use. This will keep the poles supple and protected.

Please note -

These Awnings are designed as temporary structures. To keep them in good condition they should be used and then taken down and stored correctly.

If you are leaving your Awning up for longer periods of time (over two weeks) in wet/damp conditions, the woodwork will require extra maintenance – application of linseed oil – to avoid discolouration.
